

## 2631 **Introduction to Grades Eight Through Twelve**

2632       The standards for grades eight through twelve are organized differently from  
2633 those for kindergarten through grade seven. In this section strands are not used  
2634 for organizational purposes as they are in the elementary grades because the  
2635 mathematics studied in grades eight through twelve falls naturally under discipline  
2636 headings: algebra, geometry, and so forth. Many schools teach this material in  
2637 traditional courses; others teach it in an integrated fashion. To allow local  
2638 educational agencies and teachers flexibility in teaching the material, the  
2639 standards for grades eight through twelve do not mandate that a particular  
2640 discipline be initiated and completed in a single grade. The core content of these  
2641 subjects must be covered; students are expected to achieve the standards  
2642 however these subjects are sequenced.

2643       Standards are provided for Algebra I, geometry, Algebra II, trigonometry,  
2644 mathematical analysis, linear algebra, probability and statistics, advanced  
2645 placement probability and statistics, and calculus. Many of the more advanced  
2646 subjects are not taught in every middle school or high school. Moreover, schools  
2647 and districts have different ways of combining the subject matter in these various  
2648 disciplines. For example, many schools combine some trigonometry,  
2649 mathematical analysis, and linear algebra to form a precalculus course. Some  
2650 districts prefer offering trigonometry content with Algebra II.

2651       Table 1, "Mathematics Disciplines, by Grade Level," reflects typical grade-level  
2652 groupings of these disciplines in both integrated and traditional curricula. The  
2653 lightly shaded region reflects the minimum requirement for mastery by all  
2654 students. The dark shaded region depicts content that is typically considered

elective but that should also be mastered by students who complete the other disciplines in the lower grade levels and continue the study of mathematics.

Many other combinations of these advanced subjects into courses are possible. What is described in this section are standards for the academic content by discipline; this document does not endorse a particular choice of structure for courses or a particular method of teaching the mathematical content.

When students delve deeply into mathematics, they gain not only conceptual understanding of mathematical principles but also knowledge of, and experience with, pure reasoning. One of the most important goals of mathematics is to teach students logical reasoning. The logical reasoning inherent in the study of mathematics allows for applications to a broad range of situations in which answers to practical problems can be found with accuracy.

By grade eight, students' mathematical sensitivity should be sharpened. Students need to start perceiving logical subtleties and appreciate the need for sound mathematical arguments before making conclusions. Students who are not prepared for Algebra I by grade 9 should instead receive specialized instructional materials that focus on the prerequisite standards described in Appendix E. An Algebra Readiness course will prepare students for success in Algebra, and subsequent advanced courses. As students progress in the study of mathematics, they learn to distinguish between inductive and deductive reasoning; understand the meaning of logical implication; test general assertions; realize that one counterexample is enough to show that a general assertion is false; understand conceptually that although a general assertion is true in a few cases, it is not true in all cases; distinguish between something being proven and a mere plausibility argument; and identify logical errors in chains of reasoning.

**Table 1. Mathematics Disciplines, by Grade Level**

Disciplines	Grades				
	Eight	Nine	Ten	Eleven	Twelve
Algebra I					
Geometry					
Algebra II					
Probability and Statistics					
Trigonometry					
Linear Algebra					
Mathematical Analysis					
Advanced Placement Probability and Statistics					
Calculus					

2680 Mathematical reasoning and conceptual understanding are not separate from  
 2681 content; they are intrinsic to the mathematical discipline students master at more  
 2682 advanced levels.

## 2683 **Algebra I Mathematics Content Standards**

2684 Symbolic reasoning and calculations with symbols are central in algebra. Through  
 2685 the study of algebra, a student develops an understanding of the symbolic  
 2686 language of mathematics and the sciences. In addition, algebraic skills and  
 2687 concepts are developed and used in a wide variety of problem-solving situations.

---

2688 **1.0** Students identify and use the arithmetic properties of subsets of integers  
 2689 and rational, irrational, and real numbers, including closure properties for  
 2690 the four basic arithmetic operations where applicable:

2691 1.1 Students use properties of numbers to demonstrate whether  
 2692 assertions are true or false.

---

2693 **2.0** Students understand and use such operations as taking the opposite,  
 2694 finding the reciprocal, taking a root, and raising to a fractional power.  
 2695 They understand and use the rules of exponents.

2696 Simplify  $(x^3 y^{\frac{1}{2}})^6 \sqrt{xy}$ .

---

2697 **3.0** Students solve equations and inequalities involving absolute values.

2698 Solve for x:  $3|x| + 5 > 7$

2699 For which values of x is  $|x + 4| = |x| + 4$ ?

---

2700 **4.0** Students simplify expressions before solving linear equations and  
 2701 inequalities in one variable, such as  $3(2x-5) + 4(x-2) = 12$ .

2702 For what values of x is the following inequality valid?

2703  $5(x-1) > 3x + 2$ .

2704 Expand and simplify  $2(3x + 1) - 8x$ .

---

**5.0** Students solve multistep problems, including word problems, involving linear equations and linear inequalities in one variable and provide justification for each step.

A-1 Pager Company charges a \$25 set-up fee plus a \$6.50 monthly charge. Cheaper Beeper charges \$8 per month with no set-up fee. Set up an inequality to determine how long one would need to have the pager until the A-1 Pager plan would be the less expensive one.

---

**6.0** Students graph a linear equation and compute the  $x$ - and  $y$ -intercepts (e.g., graph  $2x + 6y = 4$ ). They are also able to sketch the region defined by linear inequality (e.g., they sketch the region defined by  $2x + 6y < 4$ ).

Find inequalities whose simultaneous solution defines the region shown below:

---

**7.0** Students verify that a point lies on a line, given an equation of the line. Students are able to derive linear equations by using the point-slope formula.

2720		Does the point (1, 2) lie on, above, or below the graph of the line
2721		$3x - 5y + 8 = 0$ ? Explain how you can be sure of your answer.
2722		Write the equation of the line having x-intercept $-2\frac{1}{3}$ and y-intercept 5.
<hr/>		
2723	<b>8.0</b>	Students understand the concepts of parallel lines and perpendicular
2724		lines and how their slopes are related. Students are able to find the
2725		equation of a line perpendicular to a given line that passes through a
2726		given point.
2727		Find the equation of the line passing through $(-1, \frac{1}{3})$ and parallel to the
2728		line defined by $5x + 2y = 17$ .
<hr/>		
2729	<b>9.0</b>	Students solve a system of two linear equations in two variables
2730		algebraically and are able to interpret the answer graphically. Students
2731		are able to solve a system of two linear inequalities in two variables and
2732		to sketch the solution sets.
2733		$3x + y = -1$
2734		$x - \frac{1}{2}y = \frac{4}{3}$
<hr/>		
2735	<b>10.0</b>	Students add, subtract, multiply, and divide monomials and polynomials.
2736		Students solve multistep problems, including word problems, by using
2737		these techniques.
<hr/>		
2738	<b>11.0</b>	Students apply basic factoring techniques to second- and simple third-
2739		degree polynomials. These techniques include finding a common factor
2740		for all terms in a polynomial, recognizing the difference of two squares,
2741		and recognizing perfect squares of binomials.
2742		Factor $9x^3 + 6x^2 = x$ .

---

2743 **12.0** Students simplify fractions with polynomials in the numerator and  
 2744 denominator by factoring both and reducing them to the lowest terms.

2745 **Simplify.**  $\frac{x^2 + 2x + 1}{x^2 - 1}$

---

2746 **13.0** Students add, subtract, multiply, and divide rational expressions and  
 2747 functions. Students solve both computationally and conceptually  
 2748 challenging problems by using these techniques.

2749 **Solve for  $x$  and give a reason for each step:**  $\frac{2}{3x+1} + 2 = \frac{2}{3}$  (ICAS 1997)

---

2750 **14.0** Students solve a quadratic equation by factoring or completing the  
 2751 square.

---

2752 **15.0** Students apply algebraic techniques to solve rate problems, work  
 2753 problems, and percent mixture problems.

---

2754 **16.0** Students understand the concepts of a relation and a function, determine  
 2755 whether a given relation defines a function, and give pertinent  
 2756 information about given relations and functions.

---

2757 **17.0** Students determine the domain of independent variables and the range  
 2758 of dependent variables defined by a graph, a set of ordered pairs, or a  
 2759 symbolic expression.

---

2760 **18.0** Students determine whether a relation defined by a graph, a set of  
 2761 ordered pairs, or a symbolic expression is a function and justify the  
 2762 conclusion.

---

2763 **19.0** Students know the quadratic formula and are familiar with its proof by  
 2764 completing the square.

*Toni is solving this equation by completing the square.*

$$ax^2 + bx + c = 0 \text{ (where } a \geq 0\text{)}$$

$$\text{Step1: } ax^2 + bx = -c$$

$$\text{Step2: } x^2 + \frac{b}{a}x = -\frac{c}{a}$$

Step3: ?

*Which should be Step 3 in the solution?*

2765

$$A \quad x^2 = -\frac{c}{b} - \frac{b}{a}x$$

$$B \quad x + \frac{b}{a} = -\frac{c}{ax}$$

$$C \quad x^2 + \frac{b}{a}x + \frac{b}{2a} = -\frac{c}{a} + \frac{b}{2a}$$

$$D \quad x^2 + \frac{b}{a}x + \left(\frac{b}{2a}\right)^2 = -\frac{c}{a} + \left(\frac{b}{2a}\right)^2$$

2766 (CST released test question, 2004)

2767 **20.0** Students use the quadratic formula to find the roots of a second-degree  
 2768 polynomial and to solve quadratic equations.

2769 Suppose the graph of  $y = px^2 + 5x + 2$  intersects the x-axis at two  
 2770 distinct points, where  $p$  is a constant. What are the possible values of  $p$ ?

2771 **21.0** Students graph quadratic functions and know that their roots are the  
 2772 x-intercepts.

2773 The graph of  $y = x^2 + bx - 1$  passes through  $\left(-\frac{1}{3}, 0\right)$

2774 What is  $b$ ?

- 
- 2775    **22.0**    Students use the quadratic formula or factoring techniques or both to  
2776               determine whether the graph of a quadratic function will intersect the x-  
2777               axis in zero, one, or two points.
- 
- 2778    **23.0**    Students apply quadratic equations to physical problems, such as the  
2779               motion of an object under the force of gravity.
- 
- 2780    **24.0**    Students use and know simple aspects of a logical argument:
- 2781               24.1    Students explain the difference between inductive and deductive  
2782               reasoning and identify and provide examples of each.
- 2783               24.2    Students identify the hypothesis and conclusion in logical  
2784               deduction.
- 2785               24.3    Students use counterexamples to show that an assertion is false  
2786               and recognize that a single counterexample is sufficient to refute  
2787               an assertion.
- 
- 2788    **25.0**    Students use properties of the number system to judge the validity of  
2789               results, to justify each step of a procedure, and to prove or disprove  
2790               statements:
- 2791               25.1    Students use properties of numbers to construct simple, valid  
2792               arguments (direct and indirect) for, or formulate counterexamples  
2793               to, claimed assertions.
- 2794               25.2    Students judge the validity of an argument according to whether  
2795               the properties of the real number system and the order of  
2796               operations have been applied correctly at each step.

2797            25.3    Given a specific algebraic statement involving linear, quadratic, or  
2798                            absolute value expressions or equations or inequalities, students  
2799                            determine whether the statement is true sometimes, always, or  
2800                            never.

**Geometry Mathematics Content Standards**

The geometry skills and concepts developed in this discipline are useful to all students. Aside from learning these skills and concepts, students will develop their ability to construct formal, logical arguments and proofs in geometric settings and problems.

**1.0** Students demonstrate understanding by identifying and giving examples of undefined terms, axioms, theorems, and inductive and deductive reasoning.

Using what you know about parallel lines cut by a transversal, show that the sum of the angles in a triangle is the same as the angle in a straight line, 180 degrees.

**2.0** Students write geometric proofs, including proofs by contradiction.

If  $C$  is the center of the circle in the figure shown below, prove that angle  $b$  has twice the measure of angle  $a$ .

**3.0** Students construct and judge the validity of a logical argument and give counterexamples to disprove a statement.

2817 Prove or disprove: If two triangles have two pairs of congruent sides,  
 2818 then the triangles must be congruent.

---

2819 **4.0** Students prove basic theorems involving congruence and similarity.

2820  $AB$  is a diameter of a circle centered at  $O$ .  $CD \perp AB$ . If the length of  $AB$  is  
 2821 5, find the length of side  $CD$ .

2822  
 2823 If  $L_1$ ,  $L_2$ , and  $L_3$  are three parallel lines such that the distance from  $L_1$  to  
 2824  $L_2$  is equal to the distance from  $L_2$  to  $L_3$ , and if  $l$  is any transversal that  
 2825 intersects  $L_1$ ,  $L_2$ , and  $L_3$  at  $A_1$ ,  $A_2$ , and  $A_3$ , respectively, prove that the  
 2826 segments  $A_1A_2$  and  $A_2A_3$  are congruent.

---

2827 **5.0** Students prove that triangles are congruent or similar, and they are able  
 2828 to use the concept of corresponding parts of congruent triangles.

2829 Prove that a quadrilateral that has two pairs of congruent opposite  
 2830 angles is a parallelogram.

2831 Prove that in  $\triangle ABC$ , if D is the midpoint of side AB and a line passing  
 2832 through D and parallel to BC intersects side AC at E, then E is the  
 2833 midpoint of side AC.

---

2834 **6.0** Students know and are able to use the triangle inequality theorem.

---

2835 **7.0** Students prove and use theorems involving the properties of parallel  
 2836 lines cut by a transversal, the properties of quadrilaterals, and the  
 2837 properties of circles.

2838 Prove that the figure formed by joining, in order, the midpoints of the  
 2839 sides of a quadrilateral is a parallelogram.

---

2840 **8.0** Students know, derive, and solve problems involving the perimeter,  
 2841 circumference, area, volume, lateral area, and surface area of common  
 2842 geometric figures.

2843

2844 A right circular cone has radius 5 inches and height 8 inches.

2845

2846 What is the lateral area of the cone? (Lateral area of cone =  $\pi rl$ , where  $l$   
 2847 = slant height) (CST released test question, 2004)

---

**9.0** Students compute the volumes and surface areas of prisms, pyramids, cylinders, cones, and spheres; and students commit to memory the formulas for prisms, pyramids, and cylinders.

---

**10.0** Students compute areas of polygons, including rectangles, scalene triangles, equilateral triangles, rhombi, parallelograms, and trapezoids.

The diagram below shows the overall floor plan for a house. It has right angles at three corners. What is the area of the house? What is the perimeter of the house? (CERT 1997)

---

**11.0** Students determine how changes in dimensions affect the perimeter, area, and volume of common geometric figures and solids.

A triangle has sides of lengths  $a$ ,  $b$ , and  $c$ . What is the area of a triangle with sides of lengths  $3a$ ,  $3b$ , and  $3c$ , respectively? Prove that your answer is correct.

---

2863 **12.0** Students find and use measures of sides and of interior and exterior  
2864 angles of triangles and polygons to classify figures and solve problems.

---

2865 **13.0** Students prove relationships between angles in polygons by using  
2866 properties of complementary, supplementary, vertical, and exterior  
2867 angles.

2868 In the figure below,  $\overline{AB} = \overline{BC} = \overline{CD}$ . Find an expression for the measure  
2869 of angle  $b$  in terms of the measure of angle  $a$  and prove that your  
2870 expression is correct.

---

2871 **14.0** Students prove the Pythagorean theorem.

---

2872 **15.0** Students use the Pythagorean theorem to determine distance and find  
2873 missing lengths of sides of right triangles.

---

2874 **16.0** Students perform basic constructions with a straightedge and compass,  
2875 such as angle bisectors, perpendicular bisectors, and the line parallel to  
2876 a given line through a point off the line.

2877 Prove that the standard construction of the perpendicular from a point to  
2878 a line not containing the point is correct.

---

2879 **17.0** Students prove theorems by using coordinate geometry, including the  
 2880 midpoint of a line segment, the distance formula, and various forms of  
 2881 equations of lines and circles.

2882 Use coordinates to prove that if  $ABC$  is a triangle and  $D, E$  are points on  
 2883 sides  $AB$  and  $AC$ , respectively, so that

2884  $\frac{|AD|}{|AB|} = \frac{|AE|}{|AC|}$ , then line  $DE$  is parallel to  $BC$ .

---

2885 **18.0** Students know the definitions of the basic trigonometric functions defined  
 2886 by the angles of a right triangle. They also know and are able to use  
 2887 elementary relationships between them. For example,  $\tan(x) =$   
 2888  $\sin(x)/\cos(x)$ ,  $(\sin(x))^2 + (\cos(x))^2 = 1$ .

2889 Without using a calculator, determine which is larger,  $\tan(60^\circ)$  or  $\tan$   
 2890  $(70^\circ)$  and explain why.

---

2891 **19.0** Students use trigonometric functions to solve for an unknown length of a  
 2892 side of a right triangle, given an angle and a length of a side.

---

2893 **20.0** Students know and are able to use angle and side relationships in  
 2894 problems with special right triangles, such as  $30^\circ$ ,  $60^\circ$ , and  $90^\circ$  triangles  
 2895 and  $45^\circ$ ,  $45^\circ$ , and  $90^\circ$  triangles.

---

2896 **21.0** Students prove and solve problems regarding relationships among  
 2897 chords, secants, tangents, inscribed angles, and inscribed and  
 2898 circumscribed polygons of circles.

2899 Use the perimeter of a regular hexagon inscribed in a circle to explain  
 2900 why  $\pi > 3$ . (ICAS 1997)

2901

- 
- 2902    **22.0**    Students know the effect of rigid motions on figures in the coordinate  
2903           plane and space, including rotations, translations, and reflections.
- 2904           [Use rigid motions to prove the side-angle-side criterion of triangle](#)  
2905           [congruence.](#)

## 2906 **Algebra II Mathematics Content Standards**

2907 This discipline complements and expands the mathematical content and concepts  
 2908 of Algebra I and geometry. Students who master Algebra II will gain experience  
 2909 with algebraic solutions of problems in various content areas, including the  
 2910 solution of systems of quadratic equations, logarithmic and exponential functions,  
 2911 the binomial theorem, and the complex number system.

---

2912 **1.0** Students solve equations and inequalities involving absolute value.

2913 Sketch the graph of each function.

2914 
$$y = \left| \frac{1}{x} \right|$$

$$y = -\frac{2}{3} |x - 2| - 5$$

---

2915 **2.0** Students solve systems of linear equations and inequalities (in two or  
 2916 three variables) by substitution, with graphs, or with matrices.

2917 Draw the region in the plane that is the solution set for the inequality  
 2918  $(x - 1)(x + 2y) > 0$ .

---

2919 **3.0** Students are adept at operations on polynomials, including long division.

2920 Divide  $x^4 - 3x^2 + 3x$  by  $x^2 + 2$ .

2921 Write the answer in the form: polynomial +  $\frac{\text{linear polynomial}}{x^2 + 2}$ .

---

2922 **4.0** Students factor polynomials representing the difference of squares,  
 2923 perfect square trinomials, and the sum and difference of two cubes.

2924 Factor  $x^3 + 8$ .

2925 **5.0** Students demonstrate knowledge of how real and complex numbers are  
 2926 related both arithmetically and graphically. In particular, they can plot  
 2927 complex numbers as points in the plane.

2928 **6.0** Students add, subtract, multiply, and divide complex numbers.  
 2929 Write  $\frac{1+i}{1-2i}$  in the form of  $a + bi$ , where  $a$  and  $b$  are real numbers.

2930 **7.0** Students add, subtract, multiply, divide, reduce, and evaluate rational  
 2931 expressions with monomial and polynomial denominators and simplify  
 2932 complicated rational expressions, including those with negative  
 2933 exponents in the denominator.

2934 Simplify  $\frac{(x^2 - x)^2}{x(x-1)^{-2}(x^2 + 3x - 4)}$ .

2935 **8.0** Students solve and graph quadratic equations by factoring, completing  
 2936 the square, or using the quadratic formula. Students apply these  
 2937 techniques in solving word problems. They also solve quadratic  
 2938 equations in the complex number system.

2939 In the figure shown below, the area between the two squares is 11  
 2940 square inches. The sum of the perimeters of the two squares is 44  
 2941 inches. Find the length of a side of the larger square. (ICAS 1997)

2942

2943

2944 **9.0** Students demonstrate and explain the effect that changing a  
 2945 coefficient has on the graph of quadratic functions; that is, students can  
 2946 determine how the graph of a parabola changes as  $a$ ,  $b$ , and  $c$  vary in  
 2947 the equation  
 2948  $y = a(x-b)^2 + c$ .

---

2949 **10.0** Students graph quadratic functions and determine the maxima, minima,  
 2950 and zeros of the function.

2951 Find a quadratic function of  $x$  that has zeros at  $x = -1$  and  $x = 2$ . Find a  
 2952 cubic equation of  $x$  that has zeros at  $x = -1$  and  $x = 2$  and nowhere else.  
 2953 (ICAS 1997)

---

2954 **11.0** Students prove simple laws of logarithms.

2955 11.1 Students understand the inverse relationship between exponents  
 2956 and logarithms and use this relationship to solve problems  
 2957 involving logarithms and exponents.

2958 11.2 Students judge the validity of an argument according to whether  
 2959 the properties of real numbers, exponents, and logarithms have  
 2960 been applied correctly at each step.

---

2961 **12.0** Students know the laws of fractional exponents, understand exponential  
 2962 functions, and use these functions in problems involving exponential  
 2963 growth and decay.

2964 The number of bacteria in a colony was growing exponentially. At 1 p.m.  
 2965 yesterday the number of bacteria was 100, and at 3 p.m. yesterday it  
 2966 was 4,000. How many bacteria were there in the colony at 6 p.m.  
 2967 yesterday? (TIMSS)

---

2968 **13.0** Students use the definition of logarithms to translate between logarithms  
 2969 in any base.

---

2970 **14.0** Students understand and use the properties of logarithms to simplify  
 2971 logarithmic numeric expressions and to identify their approximate values.

2972 Find the largest integer that is less than:

2973  $\log_{10} (1,256)$

2974  $\log_{10} (.029)$

2975  $\frac{1}{2}\log_2 64 = ?$

---

2976 **15.0** Students determine whether a specific algebraic statement involving  
 2977 rational expressions, radical expressions, or logarithmic or exponential  
 2978 functions is sometimes true, always true, or never true.

2979 For positive numbers  $x$  and  $y$ , is the equation  $\log_2 xy = \log_2 x \cdot \log_2 y$   
 2980 always true, sometimes true, or never true?

2981 If  $c$  is a real number, for what values of  $c$  is it true that  $\frac{\sqrt{(c^2 - 1)^4}}{c + 1} = c - 1$ ?

---

2982 **16.0** Students demonstrate and explain how the geometry of the graph of a  
 2983 conic section (e.g., asymptotes, foci, eccentricity) depends on the  
 2984 coefficients of the quadratic equation representing it.

2985 What is the graph of  $x^2 + py^2 - 4x + 10y - 26 = 0$  when  $p = 1$ ? when  $p =$   
 2986  $4$ ? when  $p = -4$ ?

---

2987 **17.0** Given a quadratic equation of the form  $ax^2 + by^2 + cx + dy + e = 0$ ,  
 2988 students can use the method for completing the square to put the

2989 equation into standard form and can recognize whether the graph of the  
 2990 equation is a circle, ellipse, parabola, or hyperbola. Students can then  
 2991 graph the equation.

2992 Does the origin lie inside, outside, or on the geometric figure whose  
 2993 equation is  $x^2 + y^2 - 10x + 10y - 1 = 0$ ? Explain your reasoning. (ICAS  
 2994 1997)

---

2995 **18.0** Students use fundamental counting principles to compute combinations  
 2996 and permutations.

---

2997 **19.0** Students use combinations and permutations to compute probabilities.

---

2998 **20.0** Students know the binomial theorem and use it to expand binomial  
 2999 expressions that are raised to positive integer powers.

3000 What is the third term of  $(2x - 1)^6$ ?

---

3001 **21.0** Students apply the method of mathematical induction to prove general  
 3002 statements about the positive integers.

3003 What is the general term? What is a simplified expression for the sum?  
 3004 Use mathematical induction to prove that for any integer  
 3005  $n \geq 1$ ,  $1 + 3 + 5 + \dots + (2n - 1) = n^2$

---

3006 **22.0** Students find the general term and the sums of arithmetic series and of  
 3007 both finite and infinite geometric series.

3008 Find the sum of the arithmetic series:  $13 + 16 + 19 + \dots + 94$

3009 Find the sum of the geometric series:

3010  $\frac{3^5}{5^2} + \frac{3^6}{5^3} + \frac{3^7}{5^4} + \cdots + \frac{3^{32}}{5^{29}}$

3011 **23.0** Students derive the summation formulas for arithmetic series and for  
3012 both finite and infinite geometric series.

---

3013 **24.0** Students solve problems involving functional concepts, such as  
3014 composition, defining the inverse function and performing arithmetic  
3015 operations on functions.

3016 Which of the following functions are their own inverse functions? Use at  
3017 least two different methods to answer this question and explain your  
3018 methods:

3019  $f(x) = \frac{2}{x}$      $g(x) = x^3 + 4$      $h(x) = \frac{2 + \ln x}{2 - \ln x}$      $j(x) = \sqrt[3]{\frac{x^3 + 1}{x^3 - 1}}$

3020 (ICAS 1997)

---

3021 **25.0** Students use properties from number systems to justify steps in  
3022 combining and simplifying functions.

## 3023 **Trigonometry** Mathematics Content Standards

3024 Trigonometry uses the techniques that students have previously learned from the  
 3025 study of algebra and geometry. The trigonometric functions studied are defined  
 3026 geometrically rather than in terms of algebraic equations. Facility with these  
 3027 functions as well as the ability to prove basic identities regarding them is  
 3028 especially important for students intending to study calculus, more advanced  
 3029 mathematics, physics and other sciences, and engineering in college.

---

3030 **1.0** Students understand the notion of angle and how to measure it, in both  
 3031 degrees and radians. They can convert between degrees and radians.

---

3032 **2.0** Students know the definition of sine and cosine as  $y$ - and  $x$ -coordinates  
 3033 of points on the unit circle and are familiar with the graphs of the sine  
 3034 and cosine functions.

3035 Find an angle  $\beta$  between 0 and  $2\pi$  such that  $\cos(\beta) = \cos(6\pi/7)$  and  $\sin$   
 3036  $(\beta) = -\sin(6\pi/7)$ . Find an angle  $\theta$  between 0 and  $2\pi$  such that  $\sin(\theta) =$   
 3037  $\cos(6\pi/7)$  and  $\cos(\theta) = \sin(6\pi/7)$ .

---

3038 **3.0** Students know the identity  $\cos^2(x) + \sin^2(x) = 1$ :

3039 3.1 Students prove that this identity is equivalent to the Pythagorean  
 3040 theorem (i.e., students can prove this identity by using the  
 3041 Pythagorean theorem and, conversely, they can prove the  
 3042 Pythagorean theorem as a consequence of this identity).

3043 3.2 Students prove other trigonometric identities and simplify others  
 3044 by using the identity  $\cos^2(x) + \sin^2(x) = 1$ . For example, students  
 3045 use this identity to prove that  $\sec^2(x) = \tan^2(x) + 1$ .

3046 Prove  $\csc^2 x = 1 + \cot^2 x$ .

---

3047 **4.0** Students graph functions of the form  $f(t) = A \sin(Bt + C)$  or  $f(t) = A \cos$   
 3048  $(Bt + C)$  and interpret  $A$ ,  $B$ , and  $C$  in terms of amplitude, frequency,  
 3049 period, and phase shift.

3050 On a graphing calculator, graph the function  $f(x) = \sin(x) \cos(x)$ . Select  
 3051 a window so that you can carefully examine the graph.

3052 1. What is the apparent period of this function?

3053 2. What is the apparent amplitude of this function?

3054 3. Use this information to express  $f$  as a simpler trigonometric function.

---

3055 **5.0** Students know the definitions of the tangent and cotangent functions and  
 3056 can graph them.

---

3057 **6.0** Students know the definitions of the secant and cosecant functions and  
 3058 can graph them.

---

3059 **7.0** Students know that the tangent of the angle that a line makes with the  $x$ -  
 3060 axis is equal to the slope of the line.

---

3061 **8.0** Students know the definitions of the inverse trigonometric functions and  
 3062 can graph the functions.

---

3063 **9.0** Students compute, by hand, the values of the trigonometric functions and  
3064 the inverse trigonometric functions at various standard points.

---

3065 **10.0** Students demonstrate an understanding of the addition formulas for  
3066 sines and cosines and their proofs and can use those formulas to prove  
3067 and/or simplify other trigonometric identities.

3068 Use the addition formula for sine to find an expression for  $\sin(75^\circ)$ .

3069 Use the addition formula to find the numerical value of  $\sin(15^\circ)$ .

3070 Is  $g(x) = 5 \sin 3x + 2 \cos x$  a periodic function? If so, what is its period,  
3071 and what is its amplitude?

---

3072 **11.0** Students demonstrate an understanding of half-angle and double-angle  
3073 formulas for sines and cosines and can use those formulas to prove  
3074 and/or simplify other trigonometric identities.

3075 Express  $\sin 3x$  in terms of  $\sin x$  and  $\cos x$ .

---

3076 **12.0** Students use trigonometry to determine unknown sides or angles in right  
3077 triangles.

---

3078 **13.0** Students know the law of sines and the law of cosines and apply those  
3079 laws to solve problems.

3080 A vertical pole sits between two points that are 60 feet apart. Guy wires  
3081 to the top of that pole are staked at the two points. The guy wires are 40  
3082 feet and 35 feet long. How tall is the pole?

---

3083 **14.0** Students determine the area of a triangle, given one angle and the two  
3084 adjacent sides.

3085 Suppose in  $\triangle ABC$  and  $\triangle A'B'C'$ , the sides of  $AB$  and  $A'B'$  are congruent,  
3086 as are  $AC$  and  $A'C'$ , but  $\angle A$  is bigger than  $\angle A'$ . Which of  $\triangle ABC$  and  
3087  $\triangle A'B'C'$  has a bigger area? Prove that your answer is correct.

---

3088 **15.0** Students are familiar with polar coordinates. In particular, they can  
3089 determine polar coordinates of a point given in rectangular coordinates  
3090 and vice versa.

---

3091 **16.0** Students represent equations given in rectangular coordinates in terms  
3092 of polar coordinates. Express the circle of radius 2 centered at  $(2, 0)$  in  
3093 polar coordinates.

---

3094 **17.0** Students are familiar with complex numbers. They can represent a  
3095 complex number in polar form and know how to multiply complex  
3096 numbers in their polar form.

3097 What is the angle that the ray from the origin to  $3 + \sqrt{3}i$  makes with the  
3098 positive x-axis?

---

3099 **18.0** Students know DeMoivre's theorem and can give  $n$ th roots of a complex  
3100 number given in polar form.

---

3101    **19.0**    Students are adept at using trigonometry in a variety of applications and  
3102                   word problems.

3103                   A lighthouse stands 100 feet above the surface of the ocean. From what  
3104                   distance can it be seen? (Assume that the radius of the earth is 3,960  
3105                   miles.)

## 3106 **Mathematical Analysis**      **Mathematics Content Standards**

3107 This discipline combines many of the trigonometric, geometric, and algebraic  
 3108 techniques needed to prepare students for the study of calculus and strengthens  
 3109 their conceptual understanding of problems and mathematical reasoning in  
 3110 solving problems. These standards take a functional point of view toward those  
 3111 topics. The most significant new concept is that of limits. Mathematical analysis is  
 3112 often combined with a course in trigonometry or perhaps with one in linear algebra  
 3113 to make a yearlong precalculus course.

---

3114 **1.0**      Students are familiar with, and can apply, polar coordinates and vectors  
 3115 in the plane. In particular, they can translate between polar and  
 3116 rectangular coordinates and can interpret polar coordinates and vectors  
 3117 graphically.

---

3118 **2.0**      Students are adept at the arithmetic of complex numbers. They can use  
 3119 the trigonometric form of complex numbers and understand that a  
 3120 function of a complex variable can be viewed as a function of two real  
 3121 variables. They know the proof of DeMoivre's theorem.

---

3122 **3.0**      Students can give proofs of various formulas by using the technique of  
 3123 mathematical induction.

3124      Use mathematical induction to show that the sum of the interior angles in  
 3125 a convex polygon with  $n$  sides is  $(n-2) \cdot 180^\circ$ .

---

3126 **4.0**      Students know the statement of, and can apply, the fundamental  
 3127 theorem of algebra.

3128 Find all cubic polynomials of  $x$  that have zeros at  $x = -1$  and  $x = 2$  and  
 3129 nowhere else. (ICAS 1997)

---

3130 **5.0** Students are familiar with conic sections, both analytically and  
 3131 geometrically:

3132 5.1 Students can take a quadratic equation in two variables; put it in  
 3133 standard form by completing the square and using rotations and  
 3134 translations, if necessary; determine what type of conic section  
 3135 the equation represents; and determine its geometric components  
 3136 (foci, asymptotes, and so forth).

3137 5.2 Students can take a geometric description of a conic section—for  
 3138 example, the locus of points whose sum of its distances from  $(1,$   
 3139  $0)$  and  $(-1, 0)$  is 6—and derive a quadratic equation representing  
 3140 it.

---

3141 **6.0** Students find the roots and poles of a rational function and can graph the  
 3142 function and locate its asymptotes.

---

3143 **7.0** Students demonstrate an understanding of functions and equations  
 3144 defined parametrically and can graph them.

3145 Sketch a graph of  $f(x) = (x - 2)^2 - 1$ . Sketch the graphs of  $g(x) = f(|x|)$  and  
 3146 of  $h(x) = |f(x)|$ . Looking at your graph of  $h(x)$ , identify a value of  $x$  for  
 3147 which  $h(x + 1) = h(x) - 3$ .

---

3148 **8.0** Students are familiar with the notion of the limit of a sequence and the  
 3149 limit of a function as the independent variable approaches a number or  
 3150 infinity. They determine whether certain sequences converge or diverge.

3151 **Linear Algebra** **Mathematics Content Standards**

3152 The general goal in this discipline is for students to learn the techniques of matrix  
3153 manipulation so that they can solve systems of linear equations in any number of  
3154 variables. Linear algebra is most often combined with another subject, such as  
3155 trigonometry, mathematical analysis, or precalculus.

---

3156 **1.0** Students solve linear equations in any number of variables by using  
3157 Gauss-Jordan elimination.

---

3158 **2.0** Students interpret linear systems as coefficient matrices and the Gauss-  
3159 Jordan method as row operations on the coefficient matrix.

---

3160 **3.0** Students reduce rectangular matrices to row echelon form.

---

3161 **4.0** Students perform addition on matrices and vectors.

---

3162 **5.0** Students perform matrix multiplication and multiply vectors by matrices  
3163 and by scalars.

---

3164 **6.0** Students demonstrate an understanding that linear systems are  
3165 inconsistent (have no solutions), have exactly one solution, or have  
3166 infinitely many solutions.

---

3167 **7.0** Students demonstrate an understanding of the geometric interpretation  
3168 of vectors and vector addition (by means of parallelograms) in the plane  
3169 and in three-dimensional space.

---

3170 **8.0** Students interpret geometrically the solution sets of systems of  
3171 equations. For example, the solution set of a single linear equation in two  
3172 variables is interpreted as a line in the plane, and the solution set of a  
3173 two-by-two system is interpreted as the intersection of a pair of lines in  
3174 the plane.

---

3175 **9.0** Students demonstrate an understanding of the notion of the inverse to a  
3176 square matrix and apply that concept to solve systems of linear  
3177 equations.

---

3178 **10.0** Students compute the determinants of  $2 \times 2$  and  $3 \times 3$  matrices and are  
3179 familiar with their geometric interpretations as the area and volume of the  
3180 parallelepipeds spanned by the images under the matrices of the  
3181 standard basis vectors in two-dimensional and three-dimensional  
3182 spaces.

---

3183 **11.0** Students know that a square matrix is invertible if, and only if, its  
3184 determinant is nonzero. They can compute the inverse to  $2 \times 2$  and  $3 \times 3$   
3185 matrices using row reduction methods or Cramer's rule.

---

3186 **12.0** Students compute the scalar (dot) product of two vectors in  $n$ -  
3187 dimensional space and know that perpendicular vectors have zero dot  
3188 product.

## 3189 **Probability and Statistics** **Mathematics Content Standards**

3190 This discipline is an introduction to the study of probability, interpretation of data,  
 3191 and fundamental statistical problem solving. Mastery of this academic content will  
 3192 provide students with a solid foundation in probability and facility in processing  
 3193 statistical information.

---

3194 **1.0** Students know the definition of the notion of *independent events* and can  
 3195 use the rules for addition, multiplication, and complementation to solve  
 3196 for probabilities of particular events in finite sample spaces.

---

3197 **2.0** Students know the definition of *conditional probability* and use it to solve  
 3198 for probabilities in finite sample spaces.

3199 A whole number between 1 and 30 is chosen at random. If the digits of  
 3200 the number that is chosen add up to 8, what is the probability that the  
 3201 number is greater than 12?

---

3202 **3.0** Students demonstrate an understanding of the notion of *discrete random*  
 3203 *variables* by using them to solve for the probabilities of outcomes, such  
 3204 as the probability of the occurrence of five heads in 14 coin tosses.

---

3205 **4.0** Students are familiar with the standard distributions (normal, binomial,  
 3206 and exponential) and can use them to solve for events in problems in  
 3207 which the distribution belongs to those families.

---

3208 **5.0** Students determine the mean and the standard deviation of a normally  
 3209 distributed random variable.

---

3210 **6.0** Students know the definitions of the *mean*, *median*, and *mode* of a  
3211 distribution of data and can compute each in particular situations.

---

3212 **7.0** Students compute the variance and the standard deviation of a  
3213 distribution of data.

3214 Find the mean and standard deviation of the following seven numbers:

3215 4 12 5 6 8 5 9

3216 Make up another list of seven numbers with the same mean and a  
3217 smaller standard deviation. Make up another list of seven numbers with  
3218 the same mean and a larger standard deviation. (ICAS 1997)

---

3219 **8.0** Students organize and describe distributions of data by using a number  
3220 of different methods, including frequency tables, histograms, standard  
3221 line and bar graphs, stem-and-leaf displays, scatterplots, and box-and-  
3222 whisker plots.

## 3223 **Advanced Placement Probability and Statistics**

### 3224 **Mathematics Content Standards**

3225 This discipline is a technical and in-depth extension of probability and statistics. In  
 3226 particular, mastery of academic content for advanced placement gives students  
 3227 the background to succeed in the *Advanced Placement* examination in the  
 3228 subject.

---

3229 **1.0** Students solve probability problems with finite sample spaces by using  
 3230 the rules for addition, multiplication, and complementation for probability  
 3231 distributions and understand the simplifications that arise with  
 3232 independent events.

---

3233 **2.0** Students know the definition of *conditional probability* and use it to solve  
 3234 for probabilities in finite sample spaces.

3235 You have 5 coins in your pocket: 1 penny, 2 nickels, 1 dime, and 1  
 3236 quarter. If you pull out 2 coins at random and they are collectively worth  
 3237 more than 10 cents, what is the probability that you pulled out a quarter?

---

3238 **3.0** Students demonstrate an understanding of the notion of *discrete random*  
 3239 *variables* by using this concept to solve for the probabilities of outcomes,  
 3240 such as the probability of the occurrence of five or fewer heads in 14 coin  
 3241 tosses.

---

3242 **4.0** Students understand the notion of a *continuous random variable* and can  
 3243 interpret the probability of an outcome as the area of a region under the

3244 graph of the probability density function associated with the random  
 3245 variable.

3246 Consider a continuous random variable  $x$  whose possible values are  
 3247 numbers between 0 and 2 and whose probability density function is  
 3248 given by  $f(x) = 1 - \frac{1}{2}x$  for  $0 \leq x \leq 2$ . What is the probability that  $x > 1$ ?

---

3249 **5.0** Students know the definition of the *mean of a discrete random variable*  
 3250 and can determine the mean for a particular discrete random variable.

---

3251 **6.0** Students know the definition of the *variance of a discrete random*  
 3252 *variable* and can determine the variance for a particular discrete random  
 3253 variable.

---

3254 **7.0** Students demonstrate an understanding of the standard distributions  
 3255 (normal, binomial, and exponential) and can use the distributions to solve  
 3256 for events in problems in which the distribution belongs to those families.  
 3257 Suppose that  $X$  is a normally distributed random variable with mean  $m =$   
 3258  $0$ . If  $P(X < c) = 2/3$ , find  $P(-c < X < c)$ .

---

3259 **8.0** Students determine the mean and the standard deviation of a normally  
 3260 distributed random variable.

---

3261 **9.0** Students know the central limit theorem and can use it to obtain  
 3262 approximations for probabilities in problems of finite sample spaces in  
 3263 which the probabilities are distributed binomially.

---

3264 **10.0** Students know the definitions of the *mean*, *median*, and *mode of*  
3265 *distribution* of data and can compute each of them in particular  
3266 situations.

---

3267 **11.0** Students compute the variance and the standard deviation of a  
3268 distribution of data.

---

3269 **12.0** Students find the line of best fit to a given distribution of data by using  
3270 least squares regression.

---

3271 **13.0** Students know what the *correlation coefficient of two variables* means  
3272 and are familiar with the coefficient's properties.

---

3273 **14.0** Students organize and describe distributions of data by using a number  
3274 of different methods, including frequency tables, histograms, standard  
3275 line graphs and bar graphs, stem-and-leaf displays, scatterplots, and  
3276 box-and-whisker plots.

---

3277 **15.0** Students are familiar with the notions of a statistic of a distribution of  
3278 values, of the sampling distribution of a statistic, and of the variability of a  
3279 statistic.

---

3280 **16.0** Students know basic facts concerning the relation between the mean  
3281 and the standard deviation of a sampling distribution and the mean and  
3282 the standard deviation of the population distribution.

---

3283    **17.0**    Students determine confidence intervals for a simple random sample  
3284                from a normal distribution of data and determine the sample size  
3285                required for a desired margin of error.

---

3286    **18.0**    Students determine the  $P$ -value for a statistic for a simple random  
3287                sample from a normal distribution.

---

3288    **19.0**    Students are familiar with the *chi*-square distribution and *chi*-square test  
3289                and understand their uses.

## 3290 **Calculus** Mathematics Content Standards

3291 When taught in high school, calculus should be presented with the same level of  
 3292 depth and rigor as are entry-level college and university calculus courses. These  
 3293 standards outline a complete college curriculum in one variable calculus. Many  
 3294 high school programs may have insufficient time to cover all of the following  
 3295 content in a typical academic year. For example, some districts may treat  
 3296 differential equations lightly and spend substantial time on infinite sequences and  
 3297 series. Others may do the opposite. Consideration of the College Board syllabi for  
 3298 the Calculus AB and Calculus BC sections of the *Advanced Placement*  
 3299 *Examinations in Mathematics* may be helpful in making curricular decisions.  
 3300 Calculus is a widely applied area of mathematics and involves a beautiful intrinsic  
 3301 theory. Students mastering this content will be exposed to both aspects of the  
 3302 subject.

---

3303 **1.0** Students demonstrate knowledge of both the formal definition and the  
 3304 graphical interpretation of limit of values of functions. This knowledge  
 3305 includes one-sided limits, infinite limits, and limits at infinity. Students  
 3306 know the definition of convergence and divergence of a function as the  
 3307 domain variable approaches either a number or infinity:

3308 1.1 Students prove and use theorems evaluating the limits of sums,  
 3309 products, quotients, and composition of functions.

3310 1.2 Students use graphical calculators to verify and estimate limits.

3311 1.3 Students prove and use special limits, such as the limits of  
 3312  $(\sin(x))/x$  and  $(1-\cos(x))/x$  as  $x$  tends to 0.

3313 Evaluate the following limits, justifying each step:

3314  $\lim_{x \rightarrow 4} \frac{x-4}{\sqrt{x}-2}$

3315  $\lim_{x \rightarrow 0} \frac{1-\cos(2x)}{\sin(3x)}$

3316  $\lim_{x \rightarrow \infty} \left( x - \sqrt{x^2 - x} \right)$

3317 **2.0** Students demonstrate knowledge of both the formal definition and the  
3318 graphical interpretation of continuity of a function.

3319 For what values of  $x$  is the function  $f(x) = \frac{x^2 - 1}{x^2 - 4x + 3}$  continuous?

3320 Explain.

3321 **3.0** Students demonstrate an understanding and the application of the  
3322 intermediate value theorem and the extreme value theorem.

3323 **4.0** Students demonstrate an understanding of the formal definition of the  
3324 derivative of a function at a point and the notion of differentiability:

3325 4.1 Students demonstrate an understanding of the derivative of a  
3326 function as the slope of the tangent line to the graph of the  
3327 function.

3328 4.2 Students demonstrate an understanding of the interpretation of  
3329 the derivative as an instantaneous rate of change. Students can  
3330 use derivatives to solve a variety of problems from physics,  
3331 chemistry, economics, and so forth that involve the rate of change  
3332 of a function.

3333 4.3 Students understand the relation between differentiability and  
3334 continuity.

3335	4.4	Students derive derivative formulas and use them to find the
3336		derivatives of algebraic, trigonometric, inverse trigonometric,
3337		exponential, and logarithmic functions.
3338		Find all points on the graph of $f(x) = \frac{x^2 - 2}{x + 1}$ where the tangent line is
3339		parallel to the tangent line at $x = 1$ .
3340	<b>5.0</b>	Students know the chain rule and its proof and applications to the
3341		calculation of the derivative of a variety of composite functions.
3342	<b>6.0</b>	Students find the derivatives of parametrically defined functions and use
3343		implicit differentiation in a wide variety of problems in physics, chemistry,
3344		economics, and so forth. For the curve given by the equation
3345		$\sqrt{x} + \sqrt{y} = 4$ , use implicit differentiation to find $\frac{d^2y}{dx^2}$ .
3346	<b>7.0</b>	Students compute derivatives of higher orders.
3347	<b>8.0</b>	Students know and can apply Rolle's theorem, the mean value theorem,
3348		and L'Hôpital's rule.
3349	<b>9.0</b>	Students use differentiation to sketch, by hand, graphs of functions. They
3350		can identify maxima, minima, inflection points, and intervals in which the
3351		function is increasing and decreasing.
3352	<b>10.0</b>	Students know Newton's method for approximating the zeros of a
3353		function.

---

3354 **11.0** Students use differentiation to solve optimization (maximum-minimum  
3355 problems) in a variety of pure and applied contexts.

3356 A man in a boat is 24 miles from a straight shore and wishes to reach a  
3357 point 20 miles down shore. He can travel 5 miles per hour in the boat  
3358 and 13 miles per hour on land. Find the minimal time for him to reach his  
3359 destination and where along the shore he should land the boat to arrive  
3360 as fast as possible.

---

3361 **12.0** Students use differentiation to solve related rate problems in a variety of  
3362 pure and applied contexts.

---

3363 **13.0** Students know the definition of the definite integral by using Riemann  
3364 sums. They use this definition to approximate integrals.

3365 The following is a Riemann sum that approximates the area under the  
3366 graph of a function  $f(x)$ , between  $x = a$  and  $x = b$ . Determine a possible  
3367 formula for the function  $f(x)$  and for the values of  $a$  and  $b$ :  $\sum_{i=1}^n \frac{2}{n} e^{1+\frac{2i}{n}}$

---

3368 **14.0** Students apply the definition of the integral to model problems in physics,  
3369 economics, and so forth, obtaining results in terms of integrals.

---

3370 **15.0** Students demonstrate knowledge and proof of the fundamental theorem  
3371 of calculus and use it to interpret integrals as antiderivatives.

3372 If  $f(x) = \int_1^x \sqrt{1+t^3} dt$ , find  $f'(2)$ .

---

3373 **16.0** Students use definite integrals in problems involving area, velocity,  
 3374 acceleration, volume of a solid, area of a surface of revolution, length of  
 3375 a curve, and work.

---

3376 **17.0** Students compute, by hand, the integrals of a wide variety of functions  
 3377 by using techniques of integration, such as substitution, integration by  
 3378 parts, and trigonometric substitution. They can also combine these  
 3379 techniques when appropriate. Evaluate the following:

3380  $\int \frac{\sin(1-\sqrt{x})}{\sqrt{x}} dx$        $\int_1^e \frac{\ln x}{\sqrt{x}} dx$        $\int_0^1 \sqrt{1+\sqrt{x}} dx$

3381  $\int \arctan x dx$        $\int \frac{\sqrt{x^2-1}}{x^3} dx.$        $\int \frac{dx}{e^x \sqrt{1-e^{2x}}}$

---

3382 **18.0** Students know the definitions and properties of inverse trigonometric  
 3383 functions and the expression of these functions as indefinite integrals.

---

3384 **19.0** Students compute, by hand, the integrals of rational functions by  
 3385 combining the techniques in standard 17.0 with the algebraic techniques  
 3386 of partial fractions and completing the square.

---

3387 **20.0** Students compute the integrals of trigonometric functions by using the  
 3388 techniques noted above.

---

3389 **21.0** Students understand the algorithms involved in Simpson's rule and  
 3390 Newton's method. They use calculators or computers or both to  
 3391 approximate integrals numerically.

---

3392    **22.0**    Students understand improper integrals as limits of definite integrals.

---

3393    **23.0**    Students demonstrate an understanding of the definitions of  
 3394               convergence and divergence of sequences and series of real numbers.  
 3395               By using such tests as the comparison test, ratio test, and alternate  
 3396               series test, they can determine whether a series converges.

3397               Determine whether the following alternating series converge absolutely,  
 3398               converge conditionally, or diverge:

3399                $\sum_{n=3}^{\infty} (-1)^n \left( \frac{2^n}{n!} \right)$      $\sum_{n=3}^{\infty} \frac{(-1)^n}{n \ln n}$      $\sum_{n=3}^{\infty} (-1)^n \left( \frac{1+n}{n + \ln n} \right)$

---

3400    **24.0**    Students understand and can compute the radius (interval) of the  
 3401               convergence of power series.

---

3402    **25.0**    Students differentiate and integrate the terms of a power series in order  
 3403               to form new series from known ones.

---

3404    **26.0**    Students calculate Taylor polynomials and Taylor series of basic  
 3405               functions, including the remainder term.

---

3406    **27.0**    Students know the techniques of solution of selected elementary  
 3407               differential equations and their applications to a wide variety of situations,  
 3408               including growth-and-decay problems.
